

INTRODUCTION

MAYCO CORCIDE is a water soluble, oil insoluble combination corrosion inhibitor, biocide, and oxygen scavenger. CORCIDE is soluble in both fresh water and brines.

MAYCO CORCIDE is a blend of organic compounds. The mixture is formulated with an agent to scavenge oxygen up to saturation in water when used at recommended concentrations.

SUGGESTED APPLICATIONS

MAYCO CORCIDE is recommended for use as a complete corrosion inhibitor in non-damaging fluids. MAYCO CORCIDE will prevent oxygen attack and will protect against corrosion from hydrogen sulfide, carbon dioxide, and organic acids.

MAYCO CORCIDE exhibits extended bacterial protection in workover and packer fluids. It will prevent the biodegradation of any polymer system.

MIXING PROCEDURES

For clean fresh or brine waters, a concentration of 20 to 30 gallons of CORCIDE per 100 barrels of fluid is recommended.

Since the product will adsorb on solids in a water-phase system, it is recommended that concentrations be increased to adjust to any solids present in the water to be used.

PACKAGING

MAYCO CORCIDE is packaged in 50 lb. multi-wall sacks.
